

Renovations Scheduled for Three Tripps Run Pedestrian Footbridges

April - June 2006

The City of Falls Church, through contract with Fort Myer Construction Corporation, will perform repairs to three Tripps Run pedestrian footbridges April through June 2006. The three footbridges were previously identified as being in need of repair due to broken, split, and deteriorated elements. The footbridges and their rusted metal support systems will undergo either repairs or replacement this spring.

These improvements are part of the City's commitment to ensure our critical infrastructure remains operable and safe for residents. The footbridges are a vital link for residents who use them to walk or bike throughout the City and for students who cross the bridges on their way to and from school.

The footbridges will remain impassable throughout the duration of the repairs. Protective measures will be taken to prevent dust, construction debris, and other particles from falling into the stream below. For more information, please call the Department of Environmental Services at 703-248-5080 (TTY 711).
